

ACHIEVE Give-and-take Matrix

The give-and-take matrix tool maps expected linkages (i.e. “gives” and “takes”) between ACHIEVE’s research Work Packages (WPs) and external stakeholders from industry, policy, and society. Each linkage is captured as either a “give” (something an actor provides) or a “take” (something an actor receives). Each “give” and “take” is assigned to the actor who claimed it and is informed by individual stakeholder interviews and the concrete deliverables listed in the ACHIEVE Research Proposal.

How to use the tool

The steps below explain how users can read the map, open an actor’s entries, and filter or search for specific stakeholder entries. The last step (adding new entries) applies only to the KTT team and is included simply to illustrate how the tool can be continuously updated.

1. Reading the map

Actor	An individual organisation, association, or office considered a “key stakeholder” of ACHIEVE. These actors are categorized into four stakeholder groups: Research, Industry, Policy, and Society. The Research stakeholder group works differently from the other three: instead of actors clustered into sub-categories, each research WP (1-5) is considered an “actor” itself. Actors are shown as clustered bubbles on the map.	 Category: Industry Sub-category: Transport actors Actor: CO2 Pipeline Schweiz
Entry	Entries in the matrix are the “gives” and “takes” defined by the ACHIEVE Proposal and stakeholder interviews and surveys. They are represented by arrows in the visual (a) and table entries in the give-and-take matrix table (b). Solid arrows are “gives” and dashed lines are “takes”. The direction of the arrow indicates the direction of the “give” or “take” (e.g., a dashed arrow pointing from WP 3 to WWF means “WWF takes [entry] from WP 3”).	a) Entry (“take”) in the visual  b) Entry (“take”) in the matrix table Inventory and quantification Inventory of decarbonization intra-sectorial measures (HEIG-VD). List of synergies between the hard-to-abate sectors to transition to net-zero. WP 3: Hard-to-Abate → WWF Schweiz +34 Source: Proposal

For the first iteration of the matrix, only the gives and takes between non-research and research stakeholders are mapped (i.e. Industry ↔ Research; Policy ↔ Research; Society ↔ Research). In other words, an industry actor will only have “gives” and “takes” with a research actor (WP) in ACHIEVE.¹

2. Selecting an actor and understanding entries

Select any actor bubble in the visual (a). This is your **Actor 1**.

Selecting this actor opens its give-and-take matrix table in the right-hand panel (b). The rows that appear list all stakeholder categories that Actor 1 has “gives” and/or “takes” with.

(a) Actor selected

(b) WP 3's matrix table

WP 3: Hard-to-Abate Industry Research

Circularity & net-zero roadmaps

Q Search actors, sub-categories, categories...

Industry Industry

Policy Policy

Society Society

As these rows are clicked and expanded, all entries linking Actor 1 to other actors are listed in the matrix table to scroll through. The entries in the matrix table are split into two columns:

GIVE WP 3: Hard-to-Abate provides

TAKE WP 3: Hard-to-Abate receives

Entries in the matrix table are ordered from broad to specific. This means that, first, Actor 1’s “gives” and “takes” with a group of actors are listed. These entries apply to any or all actors in this group (e.g., all cantonal authorities).

These are followed (as you scroll down) by the “gives” and “takes” linked to individual actors within this group (e.g. Canton Zürich-AWEL). These entries apply specifically to this actor (Actor 2).

GIVE WP 3: Hard-to-Abate provides

+ Add

Policy Cantonal authorities sub-category

Network and coordination support

Cross-sector communication platform: coordination mechanism to facilitate conversations between relevant industry and policy actors

WP 3: Hard-to-Abate Cantonal authorities +6

ACHIEVE research perspective

Decision support: Roadmaps and reports

Company blueprints (ETHZ-SusTec). Drivers and barriers for cross-sectoral decarbonization measures for companies

WP 3: Hard-to-Abate Zh-AWEL +10

Source: Proposal

WP 3’s “give” to the Canton of Zürich

¹ In future iterations of this tool, as stakeholder collaborations through the ACHIEVE consortium are strengthened, new linkages may be added between non-academic stakeholders (e.g. Industry ↔ Society; Industry ↔ Policy; Policy ↔ Society).

Importantly, all entries linked to an individual actor also link to the group they belong to. In other words, all “gives” and “takes” that apply to **Canton Zürich-AWEL** (Zh-AWEL) also apply to **Cantonal authorities**, because Zh-AWEL is a cantonal authority.

Since each actor reports their “gives” and “takes” independently, the matrix table is structured to show these from two perspectives: Actor 1’s perspective; Actor 2’s perspective. Presenting these views together allows the user to easily compare them and assess where stakeholder expectations and capacities are aligned or mismatched.

To illustrate, in the matrix table below Actor 1 is **Migros** and Actor 2 is **WP 1 (Agri-food)**.

Research WP 1: Agri-food Systems		3 gives	6 takes
Migros's perspective			
Expert review and feedback Guidance on the SWEET ACHIEVE goal and progress as a member of the Steering Committee. Migros therewith supports that the results are translated from scientific insights to actionable levers for business and society. Migros → WP 1: Agri-food Source: Migros (Interview)	 	Decision support: Roadmaps and reports Concrete, actionable, specific recommendations to the government, framed around the cost of inaction. Recommendations must be digestible, understandable, and based on a full-system perspective. WP 1: Agri-food → Migros Source: Migros (Interview)	 

What can Migros provide WP 1, <i>according to Migros</i> ?	What does Migros expect from WP 1, <i>according to Migros</i> ?
--	---

ACHIEVE research perspective (WP 1: Agri-food)	
	Behavioural and social analysis Report on the effects of behavioural measures on adoption rates and substitution of high-emission food products WP 1: Agri-food → Migros +10 Source: Proposal

What does WP 1 expect from Migros, <i>according to WP 1 researchers</i> ?	What can WP 1 provide Migros, <i>according to WP 1 researchers</i> ?
---	--

The search box at the top of the matrix table can be used to search entries for specific stakeholder categories, sub-categories, or actors.

3. Filtering and searching options

Entries can be filtered by using the “FILTER BY” banners at the top of the side-panel. Entries can be filtered by: Category, Source (Proposal, Interview, or Other), and Type of entry (e.g. field knowledge and best practices).

FILTER BY:
CATEGORIES Industry Policy Society Research SOURCE Proposal Interview Other
TYPE Entry type ▾

Entries can also be filtered in the matrix table by actor sub-category. Clicking an actor sub-category button will filter the entries to only show Actor 1’s “gives” and “takes” with members of the selected sub-category.

Industry **Industry** 13

Industry: all Biomass Actors Farmers Food retailers Industry associations
Innovation networks Point-source emitters Technology providers Transport actors

Policy **Policy**

Policy: all Cantonal authorities Public authorities

Society **Society**

Society: all Environmental NGOs Local municipalities

The "Show all connections" button (top-right of the side-panel) switches to a full list of every entry, grouped by who owns it. This is useful for scanning all entries at once rather than actor-by-actor.

Show all connections
